Abstract: Greater food approach is the food security in the new era of China, with the aim of better satisfying the people's needs for a better life, during the new journey to comprehensively build a modern socialist country. The ultimate solution to safeguarding food security lies in enhancing science and technology. Also, the development of Greater food approach, agricultural and forestry technology innovation is an important driving force. By analyzing the practical issues such as the transformation demand of residents' consumption structure, the shortage of cultivated land resources, and the lack of autonomy of seed industry, this paper puts forward the path and strategy to the innovation and development of agriculture and forestry science and technology.

Keywords: greater food approach; food security; agriculture and forestry science and technology; innovation strategy
